

INDEX TO AREAS OF SCIENTIFIC INTEREST

1:126,720 O.S.MAPS.

WILDLIFE SERVICE 1989

INDEX TO AREAS OF SCIENTIFIC INTEREST PLOTTED ON 1:126,720
(HALF INCH) ORDNANCE SURVEY MAPS

INTRODUCTION

In 1983 the Wildlife Service, then part of the Forest and Wildlife Service, produced an index and maps, at the 1:126,720 (half inch) scale, of sites of scientific interest in the Republic of Ireland. These maps were widely circulated amongst planning and development agencies to help ensure that the value of these sites would be taken into account in development activities. In the intervening period extensive surveys by the FWS and other organisations has revealed many new sites of scientific interest, especially peatlands, while on the other hand some sites have been destroyed or damaged. To maintain their usefulness for site protection it was decided to extensively revise the index and maps to make them as up to date as possible.

The original 1983 listing was largely based on the National Heritage Inventory of Areas of Scientific Interest in Ireland (AFF July 1981), which listed 1059 areas of scientific interest. All of the AFF sites, with the exception of 82 sites of geological/geomorphological interest, whose locations or boundaries were unknown, were included in the 1983 Wildlife Service index and maps. To these were added another 101 areas of ecological (mostly ornithological) interest drawn mainly from FWS files or the scientific literature. In all a total of 1078 sites were listed. With the 418 sites now added to this edition the number of sites of scientific interest stands at 1496.

EXPLANATION OF INDEX HEADINGS:

Site No.

Within each county, the site number identifies the site on the map. The numbering system is the same as that used in the "National Heritage Inventory of Areas of Scientific Interest in Ireland" (AFF July 1981), with the additional sites following consecutively.

Name

The site name is that given in the National Heritage Inventory, or on file in the Wildlife Service.

National Grid

The grid reference is given for the centre of the area and it is expressed as a 6-figure reference if the site is smaller than 10 ha.

Interest

This indicates the main scientific interest of the site listed by AFF or WS, i.e. whether it is rock (Geological), landform (Geomorphological), or biota. For sites of biological importance, where there are no specific features of interest, they are labelled simply ECOLOGICAL, but where there is additional information, ecological sites are further divided into botanical (B), zoological (Z), or ornithological (O) sites.

Rating

The rating gives an idea of the scale of importance of the site:

- I = International
- N = National
- R = Regional
- L = Local
- NR = not rated: sites which are known to be of scientific interest, but which have received no rating because the relevant data was not available at the time the index was being compiled.

N.B. The original list had sites ordered into I, N, R and L. Because of problems involved in numbering it was not possible to maintain this order.

Status

Most sites are unprotected but a few are incorporated into National Parks or are Statutory Nature Reserves established under the Wildlife Act 1976. The following symbols prefixing the numbers indicate the status of the site:

<u>Index</u>		<u>Maps</u>
*	Nature reserve	-
*P	Partly nature reserve	-
NP	National Park	-
AT	An Taisce	-
X	Destroyed	
V	Severely damaged	

Boundaries

The boundaries are not definitive and are subject to revision. On the maps a broken line _ _ _ _ _ indicates a large area or region with a concentration of sites of scientific interest. The Burren, Co. Clare, Sheet 14, is outlined thus _ o _ o _ o _ and follows the boundary outlined in the 1985 Burren Report. 'B' after the site number indicates a change in the boundary from the original report. The location of geological sites smaller than 0.5 ha and other sites whose boundaries were not accurately known, are delimited by a dotted line.

References

- AFF An Foras Forbartha.
 Direct consultation with personnel in AFF was necessary in order to plot the location of several sites for which no map was available.
- AFF Co. Report Reports, listing and describing areas of scientific interest within each county, produced by AFF (unpublished).

The majority of sites were plotted with the aid of the maps produced in these reports.

- FWS Forest and Wildlife Service (unpublished data).
Additional areas of ecological interest were included on the maps, on the basis of data drawn from FWS files. The suffixes e.g. Bogland, Coastal, Wood, refer to specific surveys, most of which are recorded in unpublished reports housed in the Wildlife Service library.
