

Contract to update maps of Areas of Scientific Interest in Co. Wexford

N.D. Lockhart

January 1992

Introduction and Objectives

The objective of this contract was to update the 1/2 inch maps of Areas of Scientific Interest (ASI) in county Wexford. An existing set of maps, drawn on Ordnance Survey sheets 19 and 23, had been produced by C. Douglas for the Wildlife Service in April 1982. These incorporated the Areas of Scientific Interest listed in An Foras Forbartha's county report for Wexford (Goodwillie, 1979, unpublished), An Foras Forbartha's Areas of Scientific Interest in Ireland (Cabot *et. al.*, 1981) and unpublished information held at the Wildlife Service Research Branch in Bray. A revision was carried out by P. Foss in July 1983, mainly to incorporate new data on peatland sites.

The present revision includes significant new information contained in the six-volume report on rare and threatened plant sites in south-east Ireland by Rose Fitzgerald (1990, 1991). Additional information was sought from the following :- T. Curtis, C. O'Criodain, J. Ryan, E. Wymer, O. Merne, D. Norris, M. Speight, R. Harrington, J. Wilson, R. Goodwillie, E. Doran and W. Warren. A total of 33 discrete, additional sites are included on the accompanying maps, with major extensions added to 10 existing sites. No sites have been deleted. All sites have been re-numbered in accordance with the data bases being prepared by E. Wymer. An index to the ASI's of county Wexford has been produced to accompany the maps. A list of additions and amendments made to the 1982/83 map editions has been prepared for internal reference, together with large scale location maps for most of the sites.
